IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear please read and follow the special instructions described in this manual

on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

1. ABOUT LEAD FREE SOLDER (PbF: Pb free)

Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

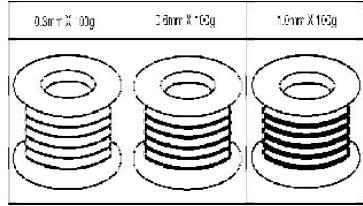

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

Caution

- PbF solder has a melting point that is $50^{\circ} \sim 70^{\circ}$ F, ($30^{\circ} \sim 40^{\circ}$ C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to $700^{\circ} \pm 20^{\circ}$ F, ($370^{\circ} \pm 10^{\circ}$ C). In case of using high temperature soldering iron, please be careful not to heat too long.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100° F, (600° C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

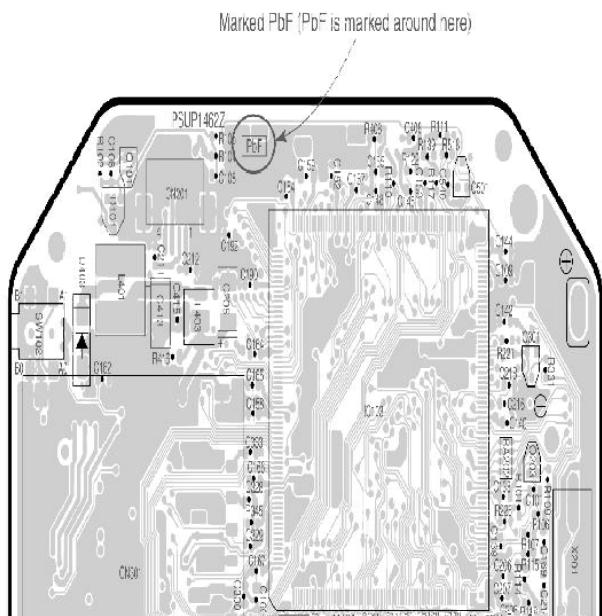

1.1. SUGGESTED PbF SOLDER

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials. The following lead free (PbF) solder wire gauge are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

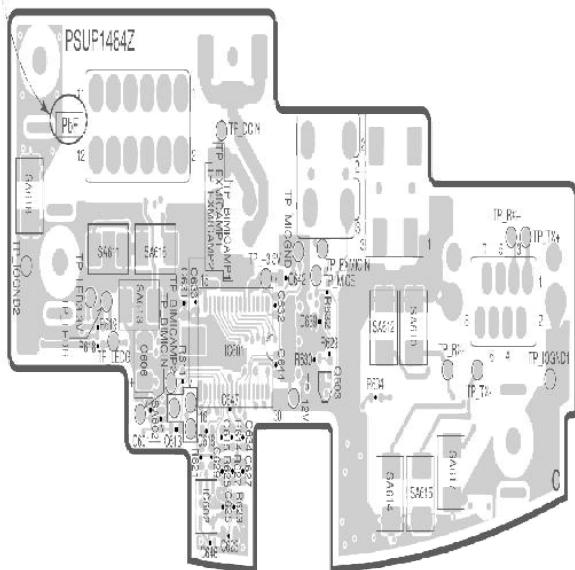

1.2. HOW TO RECOGNIZE THAT Pb FREE SOLDER IS USED

MAIN BOARD

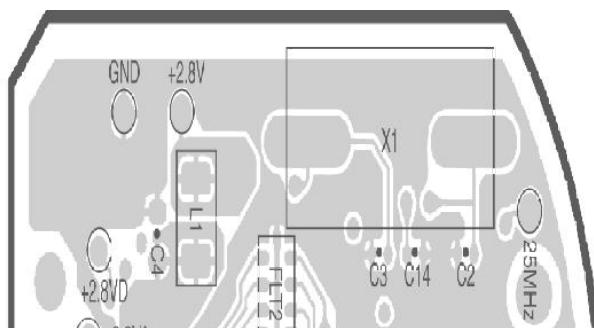

I/O BOARD

Marked PbF (PbF is marked around here)

CAMERA BOARD

2. FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When replacing, the following precautions will help to prevent recurring malfunctions.

- 1. Cover the plastic parts with aluminum foil.**
- 2. Ground the soldering irons.**
- 3. Use a conductive mat on the work-table.**
- 4. Do not grasp IC or LSI pins with bare fingers.**

3. CAUTION

3.1. SAFETY PRECAUTIONS

- 1. Before servicing, unplug the power cord to prevent an electrical shock.**
- 2. When replacing parts, use only manufacturer's recommended components for safety.**
- 3. Check the condition of power cord. Replace if wear or damage is evident.**
- 4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.**
- 5. Before returning the serviced equipment to the customer, make the following insulation resistance test to prevent a shock hazard.**

3.2. BATTERY CAUTION

Danger of explosion if the battery is replaced incorrectly. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to following caution:
Disposal or transportation of lithium batteries should be performed by permitted, in accordance with federal, state and local guidelines.

A battery continues to have no transportation limitations as long as it is separated to prevent short circuits and packed in strong packaging.

Commercial firms that dispose of any quantity of lithium cells should have a mechanism in place to account for their ultimate disposition. This is a good practice for all types of commercial or industrial waste.

When the lithium battery is exchanged, the clock settings are cleared. In this case, make clock settings again.

Recommend Type Number:

CR2032/1VC1 (BAT401) Manufactured by MATSUSHITA

3.3. TRADEMARKS

- Adobe, Acrobat and Reader are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.
- Microsoft, Windows, Hotmail and ActiveX are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Pentium is a trademark or registered trademark of Intel Corporation or its subsidiaries in the United States and other countries.
- Screen shots reprinted with permission from Microsoft Corporation.
- All other trademarks identified herein are the property of their respective owners.
- This software is based in part on the work of the Independent JPEG Group.

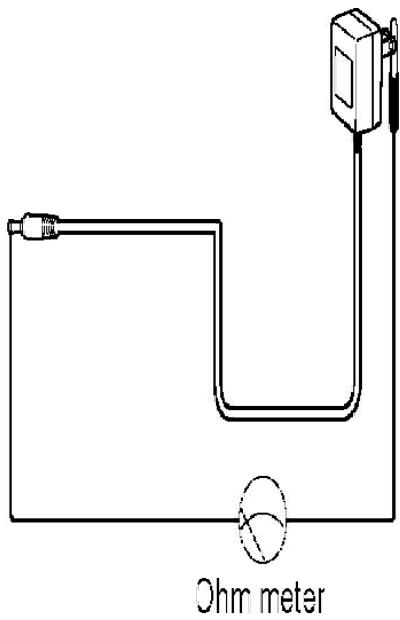

3.4. INSULATION RESISTANCE TEST

1. Unplug the AC power cord and short the two prongs of the plug with a jumper wire.
2. Measure the resistance value with ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as screw threads, etc.

Note:

Some exposed parts may be isolated from the chassis by design. These will read infinity.

3. If the measurement is outside the specified limits, there is a possibility of shock hazard. The equipment should be repaired and rechecked before it is returned to the customer.

Ohm meter

Resistance = more than $1M\Omega$ (at DC 500 V)

3.5. POWER CAUTION

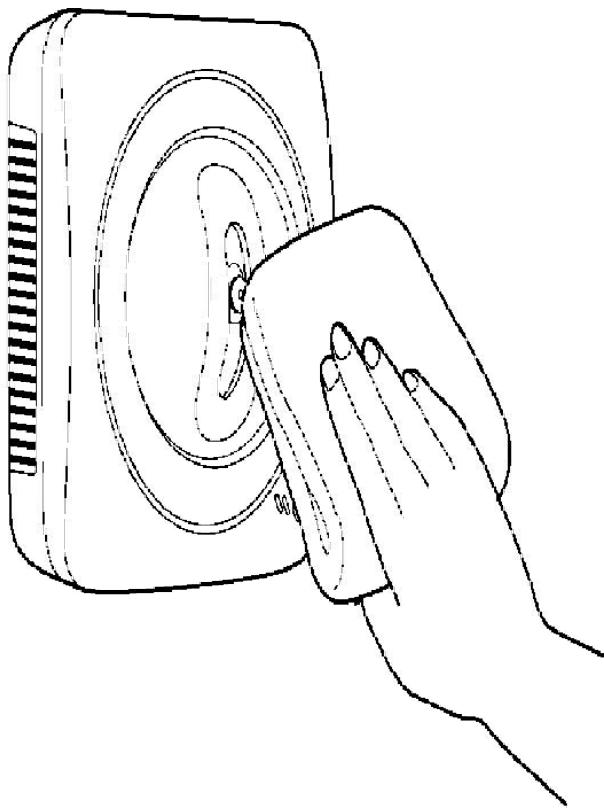

The power socket wall outlet should be located near this equipment and be easily accessible.

3.6. CLEANING

After the camera is turned off by disconnecting the AC plug, clean the camera.

3.6.1. Cleaning the Main Unit

If the lens cover has the sand or the dust, image quality may decrease. After taking away the sand or the dust on it, wipe it with a dry cloth.

Note:

- Do not use alcohol, polishing powder, cleanser, benzine, thinner, wax, petroleum products or hot water to wipe the camera. Also avoid pesticide, glass cleaner or hair spray. They may cause change in the shape or color.
- Do not directly touch the lens cover. Your fingerprints can cause the image to be out of focus.

4. SPECIFICATIONS

Network Camera

Items	Specifications
Zoom	10x digital zoom
Pan/Tilt Angle	Pan: -60° to +60°, Tilt: -45° to +20°
Number of Pixels	1/4-inch CMOS Sensor 320,000 pixels
Illuminance	5-10,000 lx (1-10,000 lx in color night view mode)
White Balance	Auto/Manual/Hold
Focus	Fixed 0.5m (20 inches) - Infinity
Caliber Ratio (F No.)	F2.8
Horizontal Viewing Angle	43°
Exposure	Auto

Other Specifications

Items	Specifications
Video Compression	JPEG (3 Levels)
Video Resolution	640 x 480, 320 x 240 (default), 160 x 120
Buffered Image *1	About 125 frames (320 x 240) with time display
Audio Communication	2-way Half Duplex
Audio Bandwidth	300 Hz-3.4 KHz
Audio Play Method	Play with ActiveX
Input Encoding Method	Encoding with ActiveX
Audio Input	Built-in Microphone or External Microphone Input Terminal
Audio Output *2	Audio Line Output Terminal for External Speaker
Frame rate *3	Max.12 frames/second (640 x 480) Max.30 frames/second (320 x 240 or 160 x 120)
Supported Protocols	IPv4/IPv6 Dual-Stack -IPv4: TCP, UDP, IP, HTTP, FTP, SMTP, DHCP, DNS, ARP, ICMP, POP3, NTP, IPsec, UPnP -IPv6: TCP, UDP, IP, HTTP, FTP, SMTP, DNS, ICMPv6, POP3, NDP, NTP, IPsec
IPsec Feature	ESP Encryption, ESP Authentication Transport mode/Tunnel mode IKE (Internet Key Exchange)
IKE (Internet Key Exchange)	Pre-Shared Key
Cipher Algorithm	DES-CBC, 3DES-CBC, AES-CBC
Message-Digest Algorithm	HMAC-MD5, HMAC-SHA-1
Message Transfer Condition	Alarm, Timer or Motion Detection
Image Transfer Method	SMTP, FTP
Interface	10Base-T/100Base-TX Ethernet RJ-45 connector x 1
Indicator Display	Power/Network Communication/Camera operation/Ethernet link
External Microphone Input	3.5 mm Mini Jack
Audio Output	3.5 mm Stereo Mini Jack (But output is mono.)
External I/O	External Sensor Input x 2 External Sensor Output x 1
SD Memory Card Slot	Full Size
Dimension (HWD)	About 100 mm (3.94 inches) x About 100 mm (3.94 inches) x About 73.5 mm (2.89 inches)
Weight	275 g (0.61 lb.) (Only the unit)
Power Supply	AC adaptor: Input 120 V AC, 60 Hz Output 12 V DC, 750 mA Consumption: About 2.5 W (5.5 W during pan/tilt scan)
Temperature	Operation: 0 °C (+32 °F) to +40 °C (+104 °F) Storage: +0 °C (+32 °F) to +50 °C (+122 °F)
Humidity	Operation: 20%-80% (No Condensation) Storage: 20%-90% (No Condensation)

- *1) The maximum number of frames changes depending on the image quality and what object you buffer.
- *2) Connect it to an amplifier or an external speaker with a built-in amplifier.
- *3) Frame rate may slow down depending on the network environment, the PC performance, the image quality, enabling IPsec or what object you view.

5. MAIN FEATURES

IPv6*1 Network Camera

Your Panasonic Network Camera supports IPv6 (Internet Protocol Version 6), IPv6 was created to address the additional IP addresses that will be needed as the Internet continues to expand. Since the camera also supports IPv4 that's currently used, it is "dual stack" design will seamlessly operate while IPv6 is phased in. For more information in IPv6 you wish to visit <http://www.ipv6.org/>.

Audio 2-way Communication*2 (Walkie-talkie Type)

Your Panasonic Network Camera now provides 2-way audio, between the camera and your PC. You will be able to hear the person on camera and respond using a microphone connected to your PC's sound card (customer-provided.) They will hear your response through the amplified speaker (customer-provided) connected to the camera.

For example, the camera can be used in the following various locations:

- In the baby's room, to hear if the baby is crying.
- At the front door, to see and hear who is at the door.
- In the children's play room, to see and hear if they are safe.

Note:

PLEASE NOTE that under certain circumstances, audio/video recording may be **PROHIBITED** by law. This device should be used only in compliance with all applicable federal, state and local statutes.

Digital zoom feature*3

Camera has a 10x digital zoom feature.

This feature allows you to increase or decrease the size of the object on the Single Camera screen, the Multi Camera screen, and the Buffered Image screen.

Therefore, it will be easy to view the object that located to a distant place.*4 A mouse wheel operation and clicking the right mouse button increase or decrease the size of the object on the Single Camera screen.

Better Image Quality

The CMOS sensor and the color night view mode provides better image quality and low light performance.

- **The CMOS sensor gives you clear image.**
- **You can monitor live video (Motion JPEG) that refreshes its image 30 frames per second.**

- Color night view mode allows you to monitor the camera in low illuminance.

Various Camera Control Features

The camera pans or tilts fast in maximum 80° per second. You can control the camera at high speed from your PC or cell phone. Alarm position feature also allows the camera to automatically turn the lens to the alarm position. Additionally, the following control features are available to easily and quickly monitor the camera.

Click to Center...When yo click a certain point on the camera image, the point is centered on the image. Preset Position...You can register 8 preset positions. When yo click each button, the image switches to its position.

Output Control...You can control the external devices (Open or Short to GND)(E.g., turning the light on or ringing a buzzer).

Multi-Camera Support

Multi-Camera page displays up to 4 cameras while supporting each audio 2-way communication. The previous model displays only 4 cameras, but this camera can switch 3 sets of 4 cameras. Additionally, the camera can displays maximum 12 cameras on a page in a static image.

Multi-Language Display

Top page, Single Camera and Multi-Camera page can be displayed in English, French, German, Italian, Spanish, Russian, Simplified Chinese or Japanese. The Setup, Maintenance and Support pages are displayed only in English or Japanese.

Motion Detection feature

Camera has a Motion Detection feature that detects movement, such as people, based on the preset threshold and sensitivity of Camera.

You can buffer the camera images, transfer to an FTP server or send E-mails using the Motion Detection function as a trigger.

*1 To connect in IPv6, subscribe to the ISP's "IPv4/IPv6 Dual-Stack" or "IPv6 over IPv4 Tunneling" service. The camera does not work in IPv6-only network.

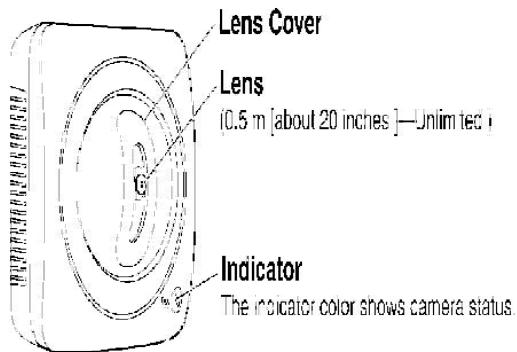

*2 Audio feature does not work on mobile phones. Talk button and Listen button cannot be used simultaneously. In IPv6, the audio feature does not work. It will be supported by the firmware update in the future. In consequence of traffic and network environments, the audio may be delayed or may break up.

*3 This feature is not available when viewing on a cell phone.

*4 As the magnification increases, the image quality decreases.

6. PARTS LOCATIONS

6.1. FRONT VIEW

Microphone
The microphone picks up audio around the camera.

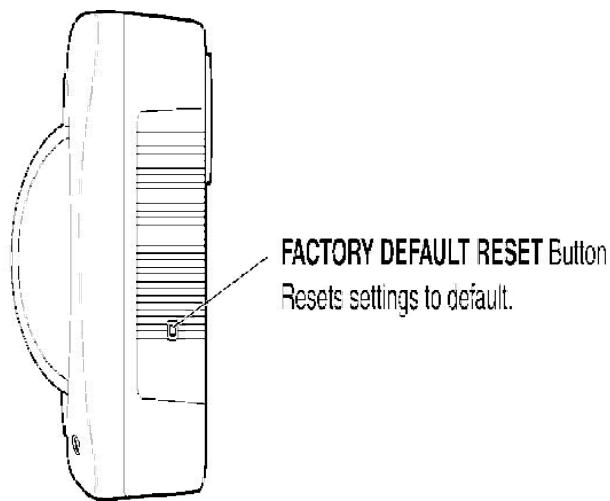

Indicator Display

Power on	Not on the LAN	Orange → Orange blinking
	On the LAN	Orange blinking → Green blinking → Green
Normal Operation *1		Green
Automatic Setup	Setting	Green blinking
	Finished seting	Green blinking → Green
Using DHCP	Getting IP address *2	Green blinking
	Got IP address	Green
Updating Firmware		Orange blinking
Pressing FACTORY DEFAULT RESET button		Orange blinking → Turning off (The camera restarts after that.)
UPnP Failure		Orange blinking (About a 2-second interval)
Internal Failure		Red blinking

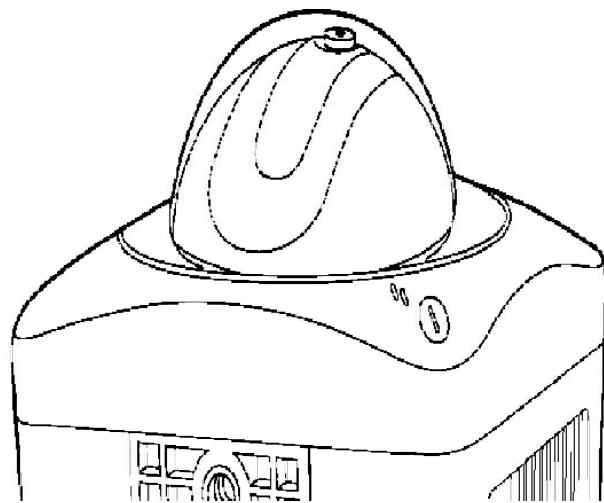

*1) The indicator turns orange if the camera is not connected to the LAN.

*2) The indicator blinks orange if the camera is not connected to the LAN.

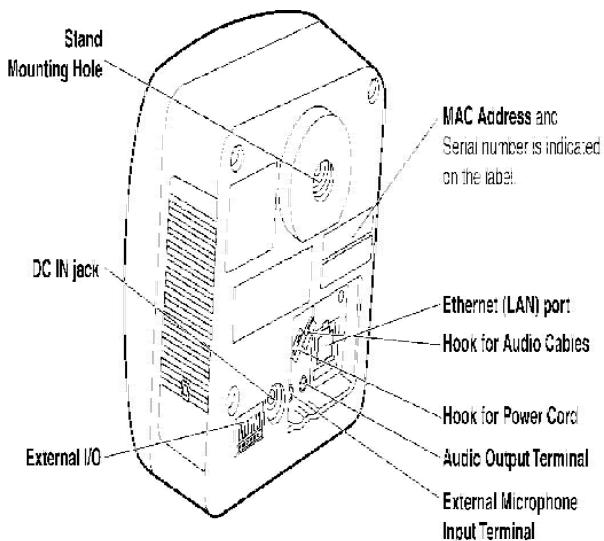

6.2. SIDE VIEW

6.3. BOTTOM VIEW

6.4. REAR VIEW

Note:

To listen to audio from the camera, an external amplified speaker (customer-provided) must be connected to the camera. The connector used is a stereo type, similar to that used by amplified PC speakers. Though the connector is stereo, the audio is not.

7. CONNECTING YOUR NETWORK CAMERA

7.1. PREPARATION

Prepare the following before connecting the Network Camera.

- Set up software (Setup CD-ROM)
- PC to fulfill the system requirements.
- Ethernet Router for LAN Connection.
- Ethernet cable (two pieces of Category 5 straight cable).

System Requirements for your PC

Your PC (Personal Computer) and network must meet the following technical specifications for the camera to work properly.

For IPv4 Connection

Item	Description
Operation System	Microsoft® Windows® XP Microsoft® Windows® 2000 Microsoft® Windows® Me Microsoft® Windows® 98SE
CPU	-For viewing single camera Pentium® III (800 MHz or greater is recommended.) -For viewing multiple cameras Pentium® 4 (1.8 GHz or greater is recommended.)
Protocol	TCP/IP protocol (HTTP, TCP, UDP, IP, DNS, ARP, ICMP)
Interface	10/100 Mbps network card installed
Web Browser	Internet Explorer 6.0 or later (Not included on the Setup CD-ROM)
Audio	Audio input/output feature (Microphone or speaker)

For IPv6 Connection

Item	Description
Operation System	Microsoft® Windows® XP Service Pack 1 or later
CPU	-For viewing single camera Pentium® III (800 MHz or greater is recommended.) -For viewing multiple cameras Pentium® 4 (1.8 GHz or greater is recommended.)
Protocol	TCP/IP protocol (HTTP, TCP, UDP, IP, DNS, ICMPv6, NDP)
Interface	10/100 Mbps network card installed
Web Browser	Internet Explorer 6.0 or later (Not included on the Setup CD-ROM)
Audio	Audio input/output feature (Microphone or speaker)

Note:

See Panasonic Network Camera support website at
<http://panasonic.co.jp/pcc/products/en/netwkcam/> for the latest information about web browser.

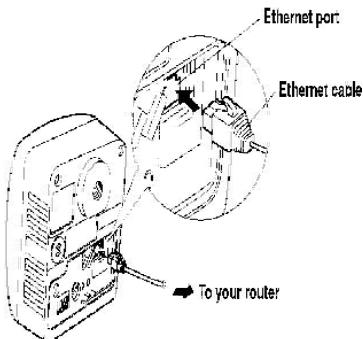

7.2. CONNECT THE CAMERA TO YOUR ROUTER

Connect the camera to your router with an Ethernet cable to set up the camera.

- Before you begin the installation, the UPnP® feature in your router needs to be enabled. Usually, the default setting disables this feature. For more info, please visit, <http://panasonic.co.jp/pcc/products/en/netwkcam/> or contact your router's manufacturer.
- These instructions assume your PC is already connected to the Internet and your home network includes a router that is UPnP® and Play) compliant.

- The camera will be connected to your router using a "straight" Cat5 network cable (customer-provided).

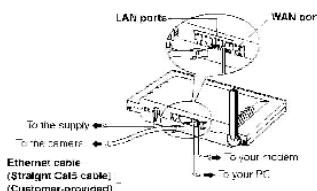

1. Connect the Ethernet cable (customer-provided) to the camera.

Note:

These instructions assume your PC is already connected to the Internet and your network includes a router.

2. Connect the Ethernet cable to your router.

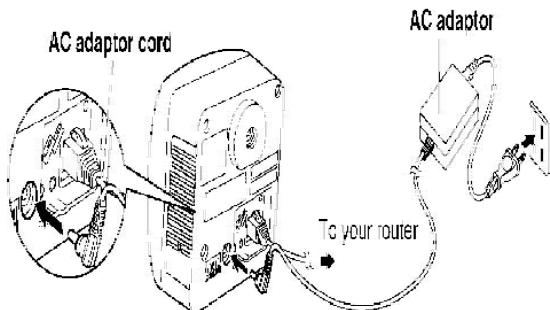

7.3. TURN THE CAMERA ON

Inserting the AC plug of the AC cord to the outlet powers up the camera.

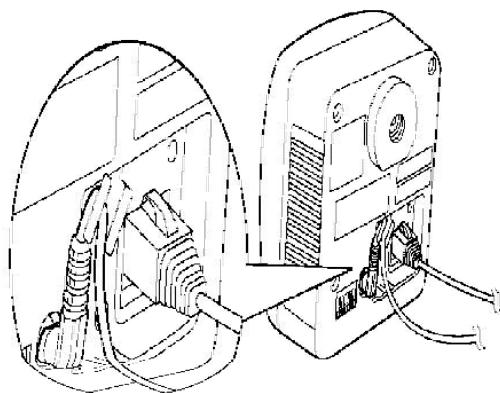

1. Connect the power cord of the AC adaptor to the DC In jack, and plug the AC cord into the outlet.

- The AC cord is used as the main disconnect device, ensure that the socket-outlet is located/installed near the equipment and is easily accessible.
- Use only specified Panasonic AC adaptor PQLV202 (Order No. PQLV202Y).

- If the indicator does not light green, see page 3 of the Troubleshooting on the Setup CD-ROM.
- A noise can be heard during pan/tilt operation. This is normal.

2. Hook the AC adaptor cord to the Hook for AC adaptor cord.

7.4. SET UP THE CAMERA

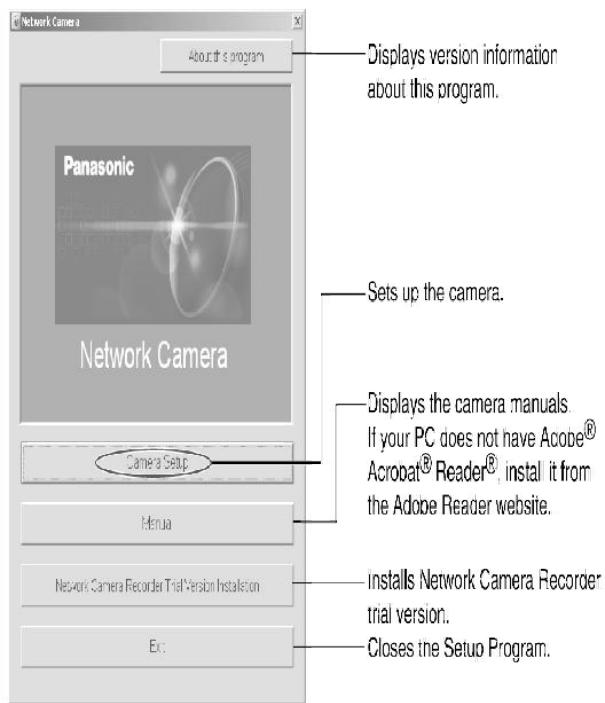

Important

- To avoid any possible problems, temporarily disable any firewall or antivirus software.
- This procedure explains installation of the camera on the same network that your PC is part of.
- Before proceeding, close your web browser.

1. Insert the Setup CD-ROM into the CD-ROM drive of the PC.

(If the Network Camera Setup window is not displayed automatically, double-click "Setup.exe" file on the Setup CD-ROM.)

2. Click [Camera Setup].

- If Windows Security Alert is displayed, click [Unblock].

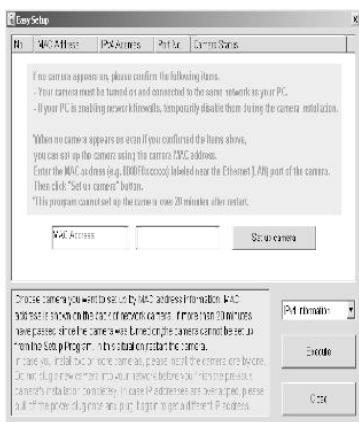

3. Select the camera to set up and click [Execute].

- This program searches for the cameras that are connected to the router and displays the MAC Addresses, IP addresses and Port Numbers.

- The MAC Address on the rear side of the camera shows which camera you select on the Camera List window.

Note:

- If the indicator does not light green, check the connection.
- If more than 20 minutes have passed since the camera was turned on, the camera cannot be set up from the Setup Program. In this situation, disconnect the AC cord from the outlet, and reconnect it again.
- The Setup Program may not list any cameras due to your firewall or antivirus software settings on your PC. If you cannot disable your firewall or antivirus software, you can set up the camera entering the camera MAC address on the following window. The camera's MAC address can be found on the label affixed to the back of each camera.

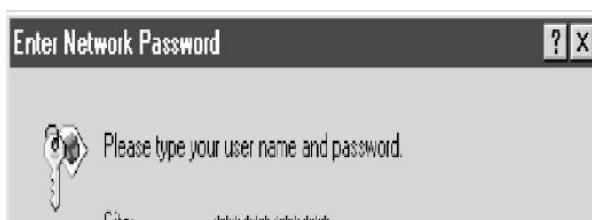

4. Click [Automatic Setup (Local Access Only)].

- For the first time installation or after pressing the FACTORY DEFAULT RESET button, only [Automatic Setup (Local Access Only)] can be selected. To set up the camera with Static or DHCP settings, after performing the [Automatic Setup (Local Access Only)], run the Setup Program again and select [Manual Setup].

5. Enter the user name and password you wish to use, and click [Save].

The screenshot shows a configuration window titled "Security: Administrator". It contains three input fields: "New User Name (8 to 15 characters)", "New Password (8 to 15 characters)", and "Retype new password". Below these fields is a note section with five points: (1) You'll be asked for User name and password to open camera's web page. Please keep your User Name and Password securely. (2) Alphabet and number only. [Space] ["], [&], [.] [<], or [>] are not allowed. (3) A capital letter/small letter is distinguished. (4) User Name and Password must be different from each other. (5) It is strongly recommended to change password regularly for security. At the bottom is a "Save" button.

6. The Enter Network Password window is displayed. Enter the user name and password that were set, and click [OK].

7. When the Single Camera page is displayed, the setup is completed.

- If Security Warning window is displayed to install ActiveX Controls, click [Yes].
- To install ActiveX Controls on Microsoft Windows XP Service Pack 2, see "Security Warning window on Microsoft Windows XP Service Pack 2".

Note:

To insure that the most current image is displayed, Internet Explorer should be configured as follows. This will not have any negative result on normal use.

- 1. While viewing any website, Click [Tools] [Internet Options].**
- 2. In the section "Temporary Internet Files", click [Settings] and check [Every visit to the page].**

- 7. Click [Next] to set up the Internet access to the camera.**

7.5. LISTENING TO CAMERA AUDIO - TALKING TO THE CAMERA

- 1. Access the camera.**

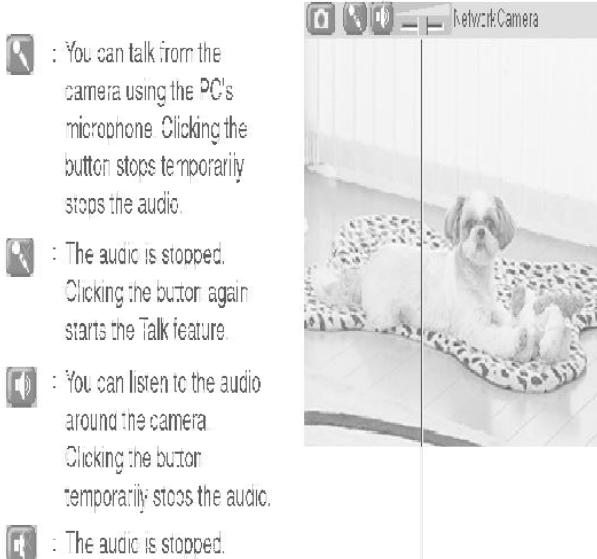

- The Top page is displayed.

- 2. Click the [Single] tab at the top of the page.**
- 3. The audio control bar is displayed at the top of the screen. Listening or Talking is selected using the 2 icons. For general users, the feature must be enabled, otherwise it will not be displayed.**

Audio Feature

Listen Button _____

Talk Button _____

Adjustment Bar _____

(Volume adjustment only for listening)

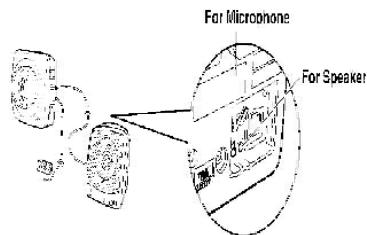

_____ This slider adjusts the volume. To the right side, the volume is larger. To the left side, the volume is smaller.

Note:

- **Talk button and Listen button cannot be used simultaneously. Talk feature is stopped during listening. Talk feature can be used only for a user. Listen feature can be used for maximum 10 users. If the audio is interrupted, reduce the max.bandwidth. In this case, the number of users for listening are reduced.**
- **Audio features such as camera microphone sensitivity and mute during pan/tilt can be set up on the Audio page.**
- **If you are running other applications or opening multiple windows, the audio may be interrupted or delayed.**
- **When the image is refreshed during any operation such as preset registration or a web browser refresh, the volume is reset to the default (midrange) position. Audio that was muted is enabled.**
- **The audio may be interrupted due to your PC's performance or network environment. Reduce the max.bandwidth.**
- **If the camera is accessed while the PC user visits other websites, the active microphone may pick up audio from the PC's speakers. Be**

careful with it.

- Talk feature cannot be used from a PC when the camera is accessed via a proxy server.
- If you cannot listen to the audio or talk from your PC, see 2.5 Audio Problems in the Troubleshooting section of the Installation/Troubleshooting on the Setup CD-ROM.
- If you use external microphone, excessive length or poor quality microphone cable can cause a degradation in audio quality.
- The cables for the external microphone must be less than 7 m (about 23 feet) long.
- To talk to the camera from your PC, an external amplified speaker such as the Panasonic RP-SPT70 or equivalent (customer-provided) must be connected to the camera. The speaker connects to the camera with a stereo audio cable similar to that used by your PC. Though the connector is stereo, the audio is not.

- The external microphone input terminal does not correspond to a line level.
Audio may be distorted when the line level is input. Audio distortion will be solved if you insert the following circuits. Under no circumstance should high level audio, such as from a speaker, be connected to this input terminal. Doing so is likely to damage the camera.

8. DISASSEMBLY INSTRUCTIONS

8.1. HOW TO REMOVE MAIN BOARD AND I/O BOARD

<p>1. Remove four Screws (B).</p> <p>2. Remove Cabinet Cover.</p>	
<p>3. Remove three Screws (A).</p> <p>4. Remove Main Board and I/O Board from Cabinet Body.</p> <p>5. Remove Connector A, Connector B and Connector C.</p>	

6. Remove FFC Cable from Main Board and I/O Board.

8.2. HOW TO REMOVE EYE BLOCK

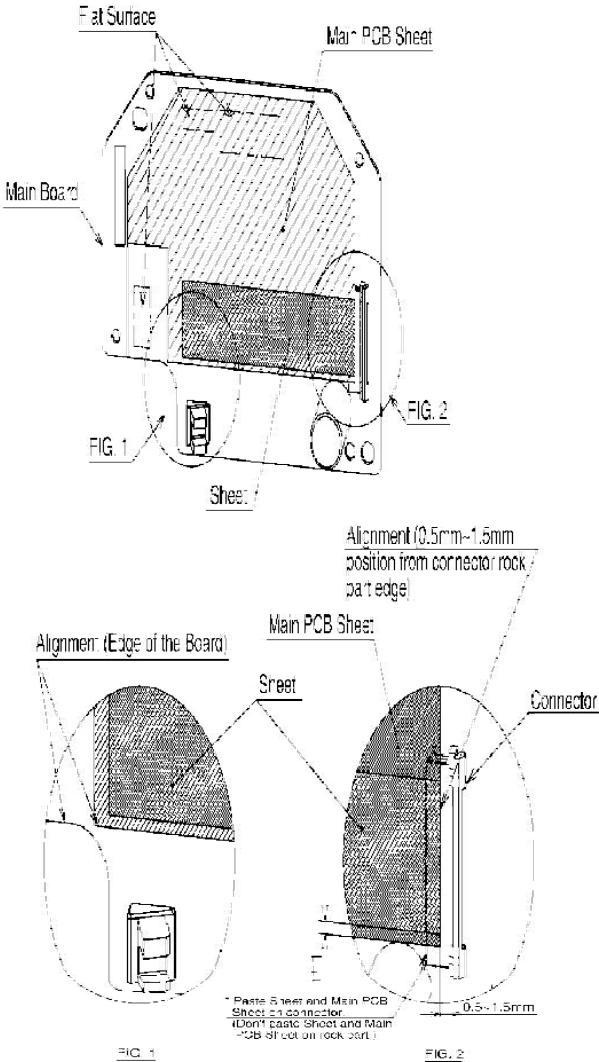

<p>1. Remove four Screws (B).</p> <p>2. Remove Cabinet Cover.</p>	
<p>3. Remove three Screws (A).</p> <p>4. Remove Main Board and I/O Board from Cabinet Body.</p> <p>5. Remove Connector A, Connector B and Connector C.</p>	

- 6. Remove two Screws (A).**
- 7. Remove Pan Motor Unit, Pan Gear and Eye Block from Cabinet Body.**

9. THE CAUTIONS AT THE TIME OF ASSEMBLY

9.1. CAUTIONS FOR SHEET ATTACHMENT

Attach the Main PCB Sheet to the Main Board and then attach the Plastic Parts to it.

Caution:

See the Figures for the position in the attachment of the Main PCB Sheet and the Sheet.

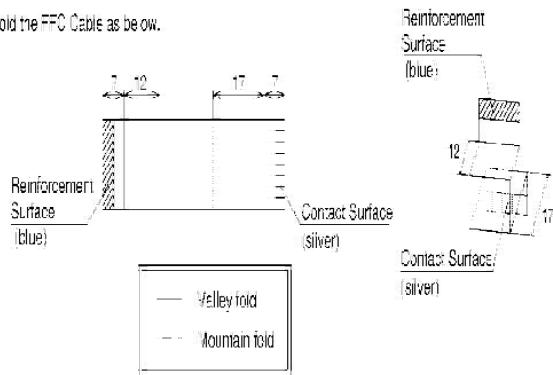

Press the Flat Surface shown in the Figure, then press the whole sheet securely to avoid peeling.

The Sheet should not cover the connector in FIG. 2.

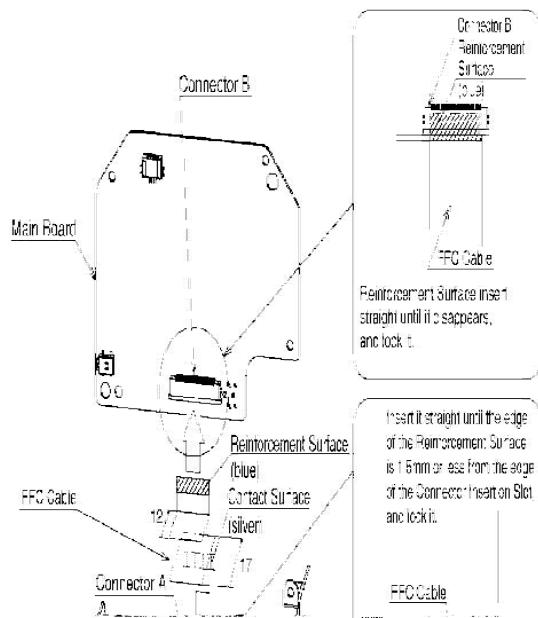

9.2. CAUTIONS FOR FFC CABLE ATTACHMENT

Process the FFC Cable to insert to the connectors of the I/O Board and the Main Board.

i1) Fold the FFC Cable as below.

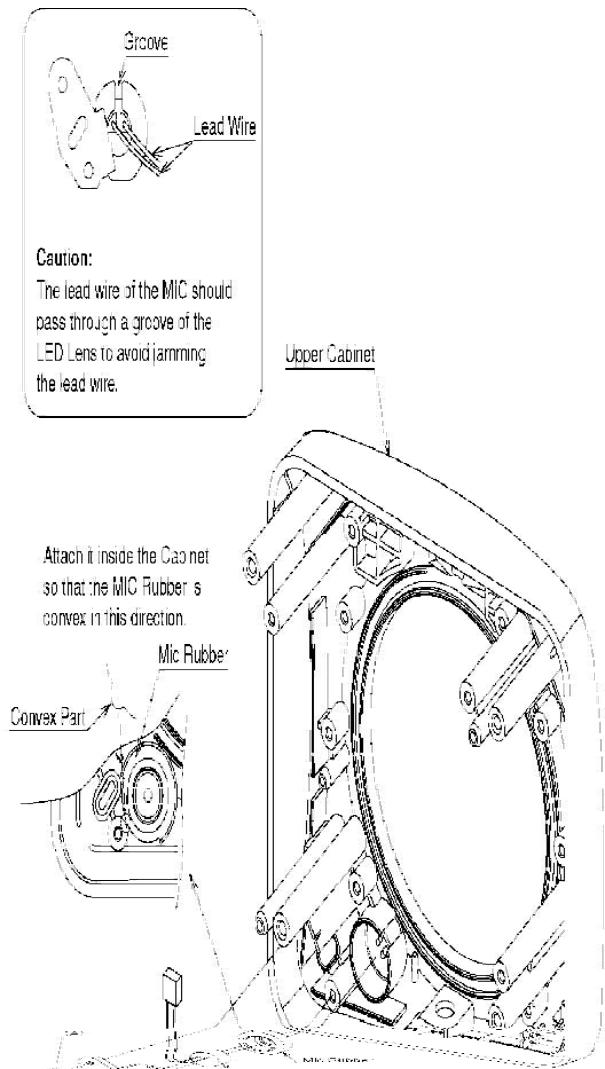

i2) Insert the processed Lead Wire into Connector A of the IC Board and Connector B of the Main Board.

9.3. CAUTIONS FOR MIC ATTACHMENT

Insert the MIC Rubber, the MIC and the LED Lens into the Upper Cabinet and fix them with the Screws (A).

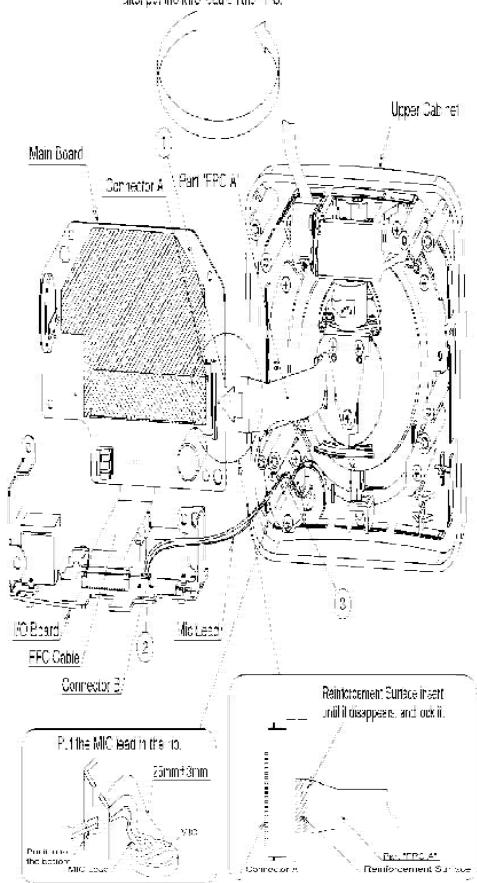

9.4. CAUTIONS FOR MAIN BOARD ATTACHMENT

Attach the component that connects the Main Board and the I/O Board with the FFC Cable, to the Upper Cabinet and fix it with the Screw (A).

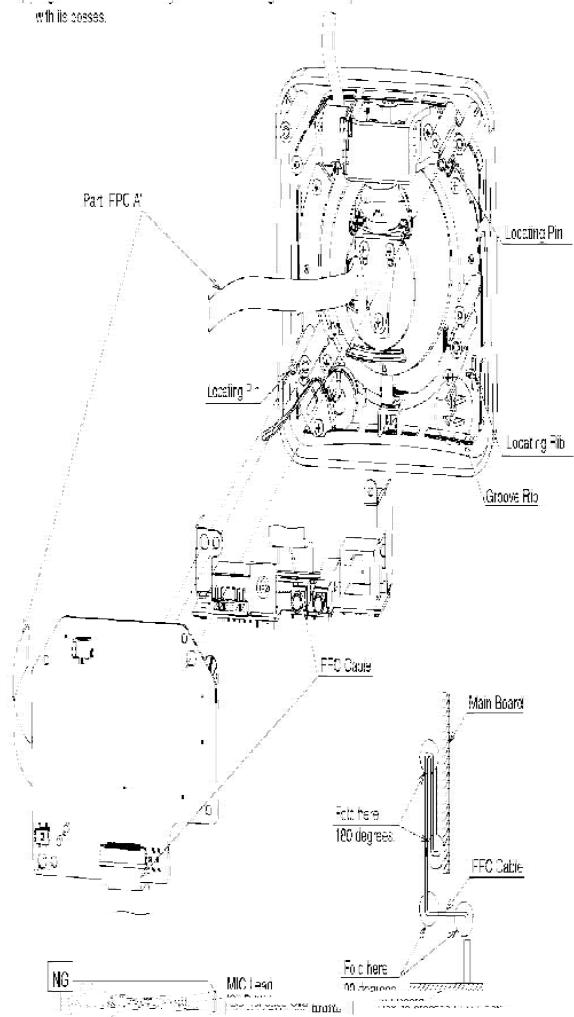

(1) Insert Part "FPC A" to Connector A of the component that connects the Main Board and the IO Board with the FFC Cable, and lock it.

(2) Connect the MIC lead to Connector B of the Board.

(3) Put the N/C Lead in the rib and turn the Main Board and the IO Board 180 degrees.
Turn the Main Board and the IO Board 180 degrees
after put the MIC lead on the FPC.

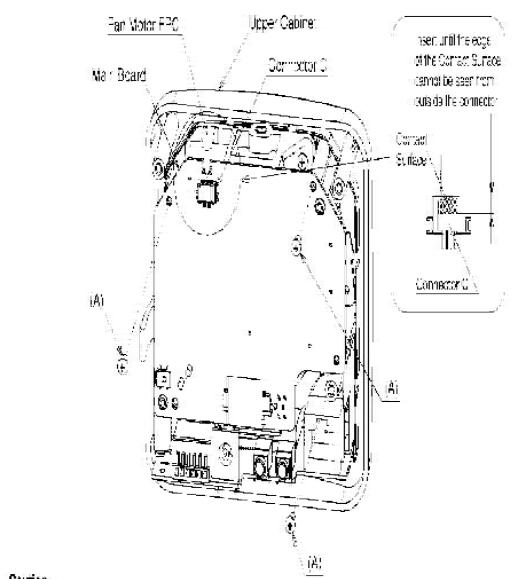

(2) Align the IC Board with the groove rib and coating bosses of the Upper Cabinet and the holes of the Main Board with its bosses.

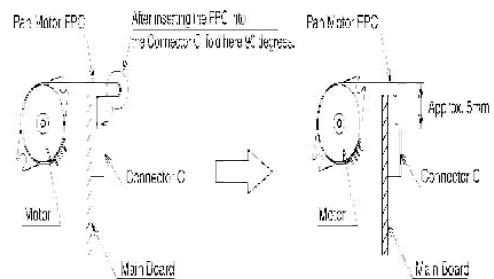

(3) Fix the Main Board to the Upper Cabinet with the Screws (A).

(4) Insert the Pan Motor FPC to Connector C.

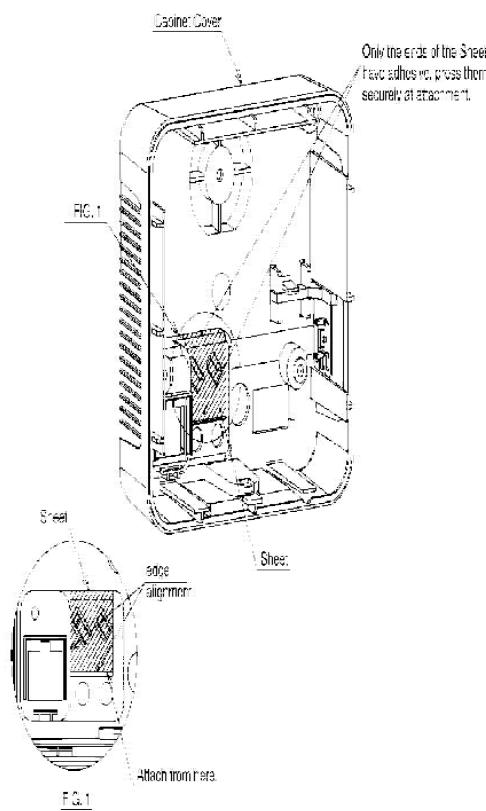

Caution:

How to process the Pan Motor FPC

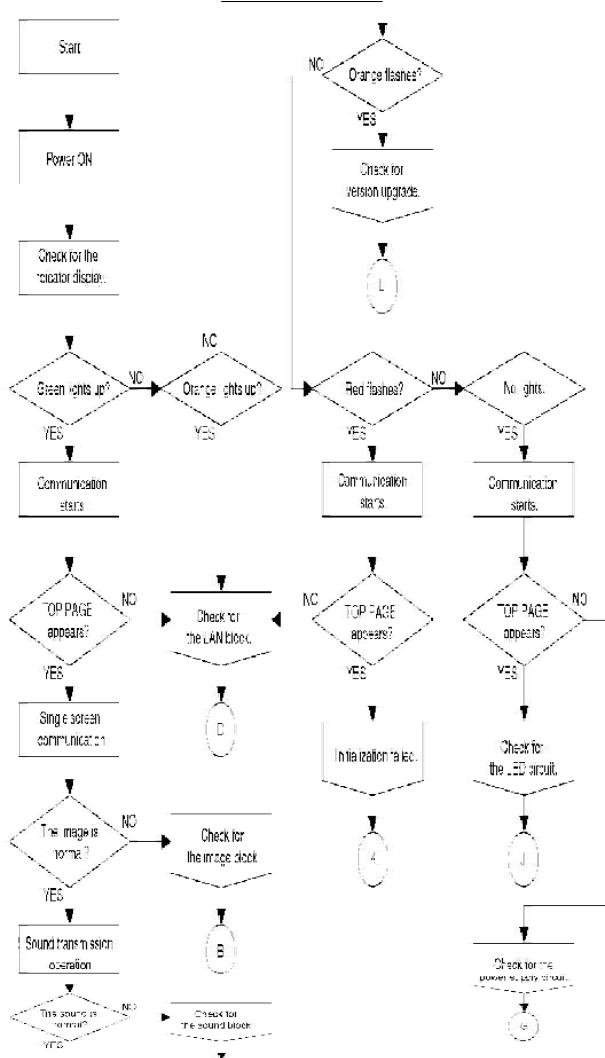

9.5. CAUTIONS FOR PLASTIC PATS ATTACHMENT

(1) Attach the Sheet inside the Cabinet Cover:
 Notes: 1) Attach it from the bottom side as shown below.
 2) Only the ends of the Sheet have adhesive, press them securely at attachment.

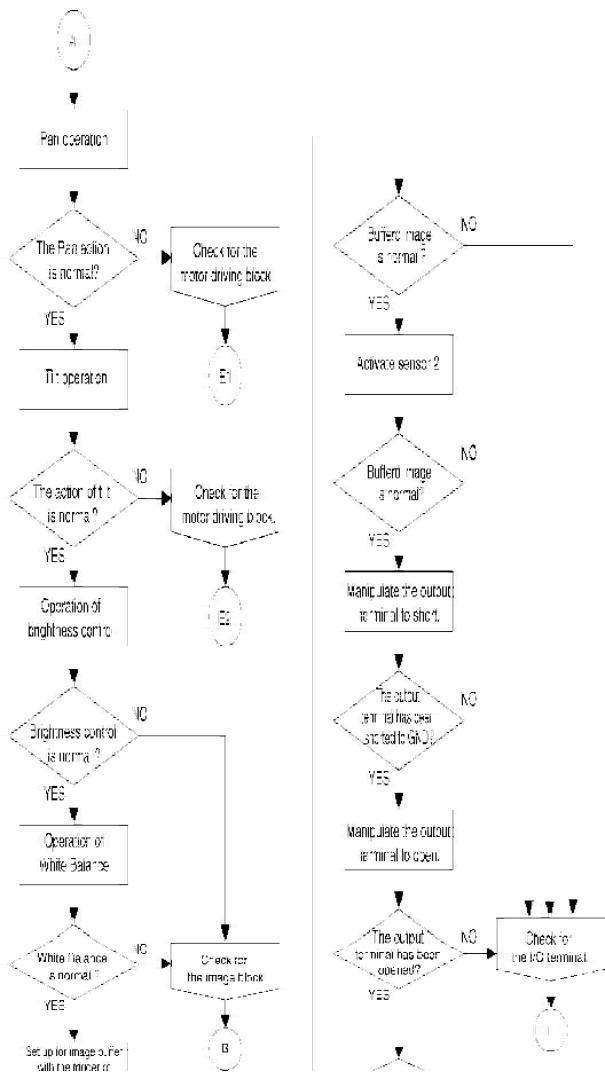

10. TROUBLE SHOUTING

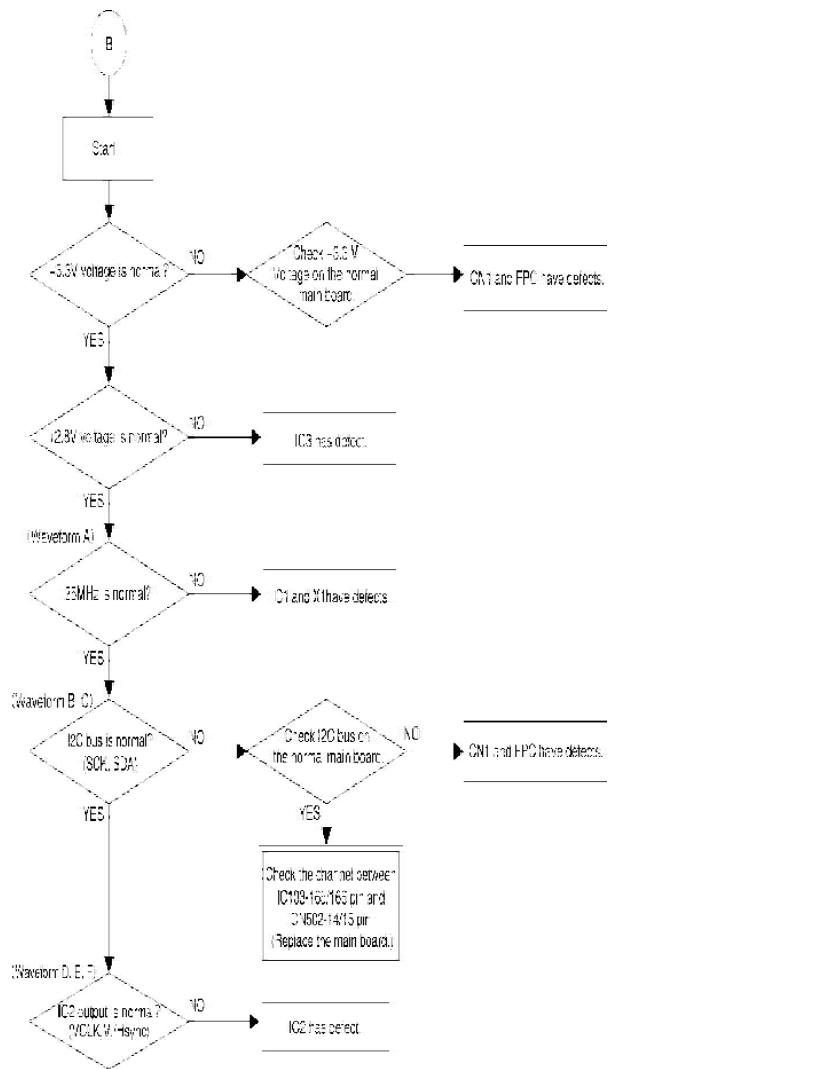

10.1. BASIC OPERATION

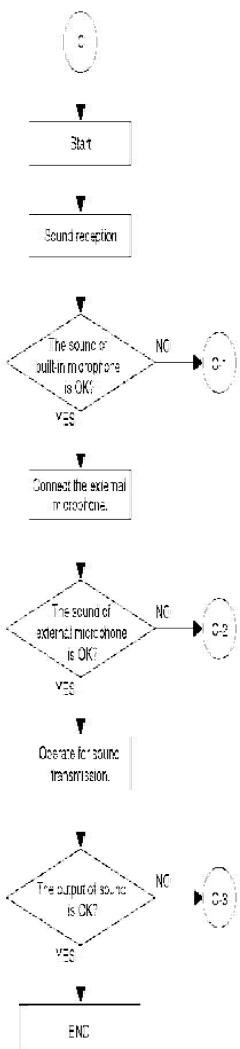

10.2. CHECK FOR OTHER FUNCTION

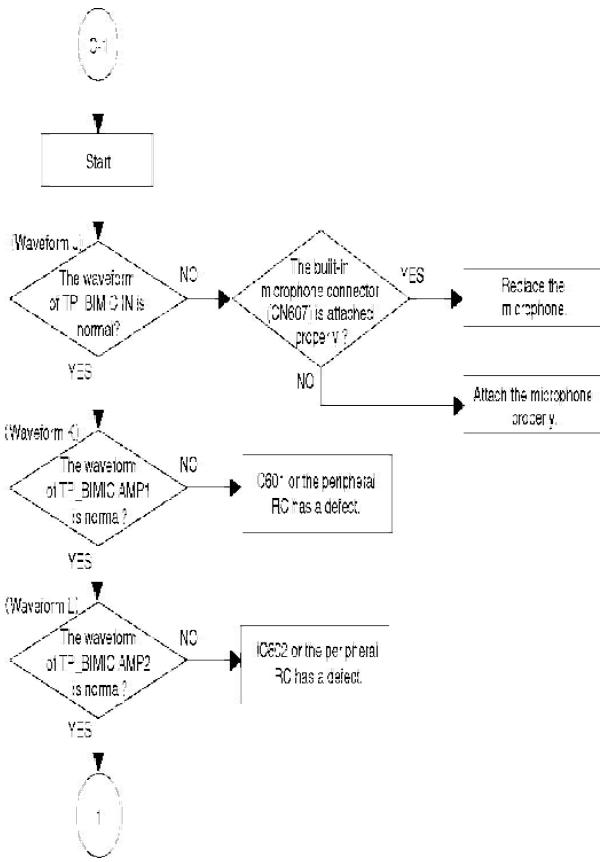

10.3. CHECK FOR SCREEN BLOCK

10.4. CHECK FOR SOUND BLOCK

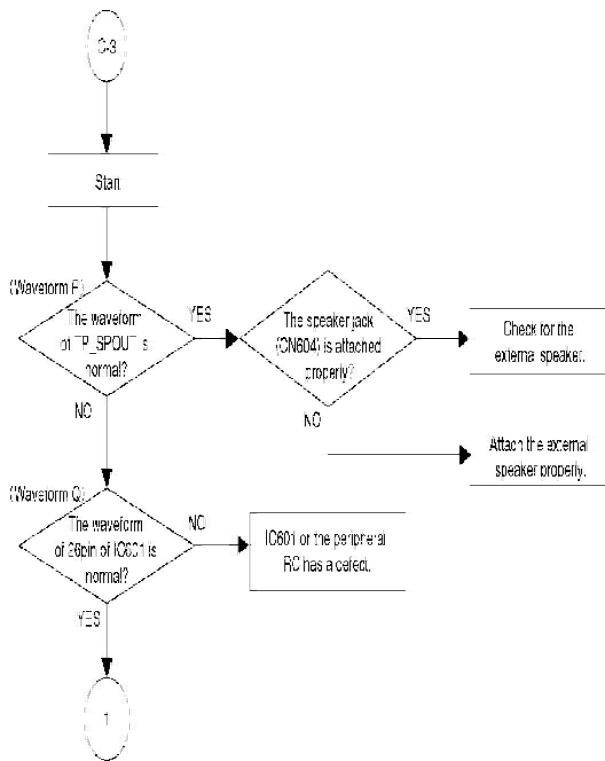

10.4.1. Built-in Microphone

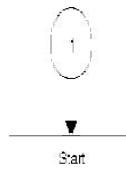

10.4.2. External Microphone

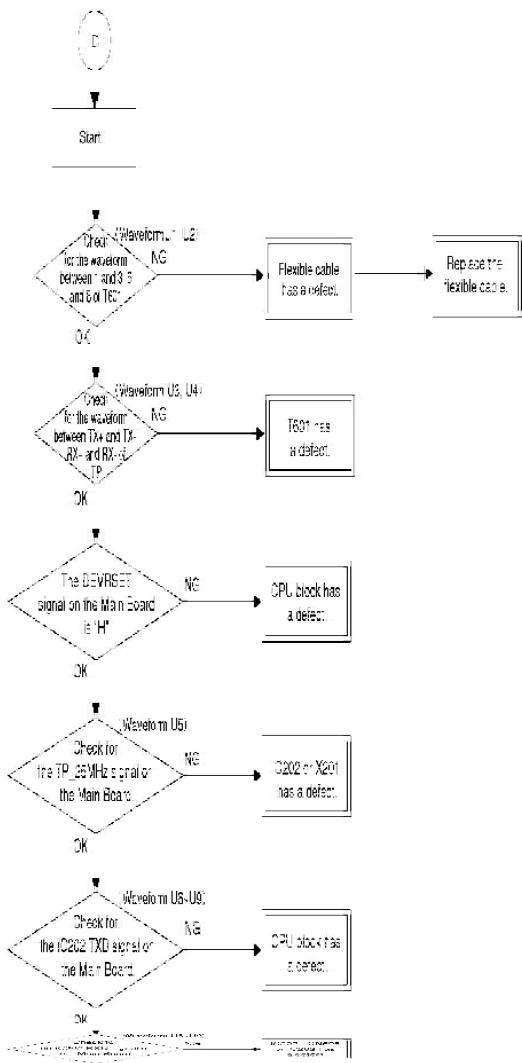

10.4.3. Speaker Output

10.4.4. Common Flow Of Built-in Microphone, External Microphone And Speaker Output

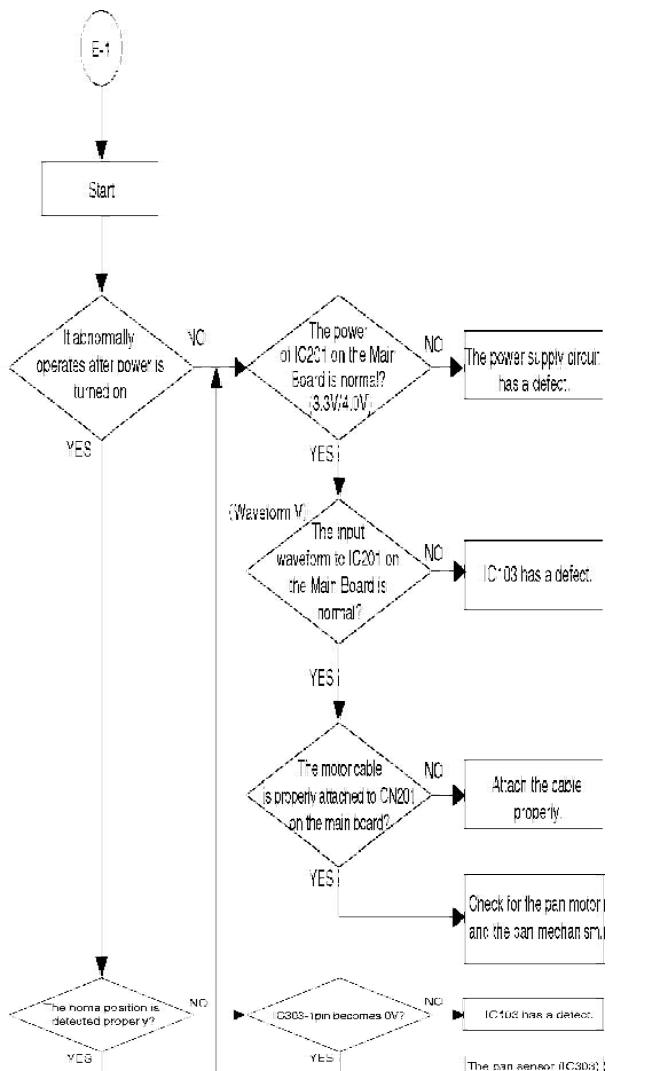

10.4.5. Check For LAN Block

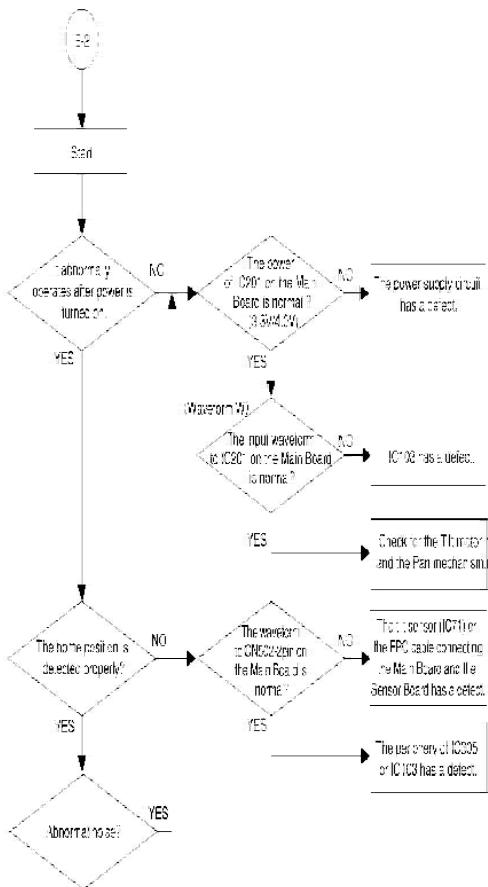

10.5. CHECK FOR MOTOR DRIVING BLOCK

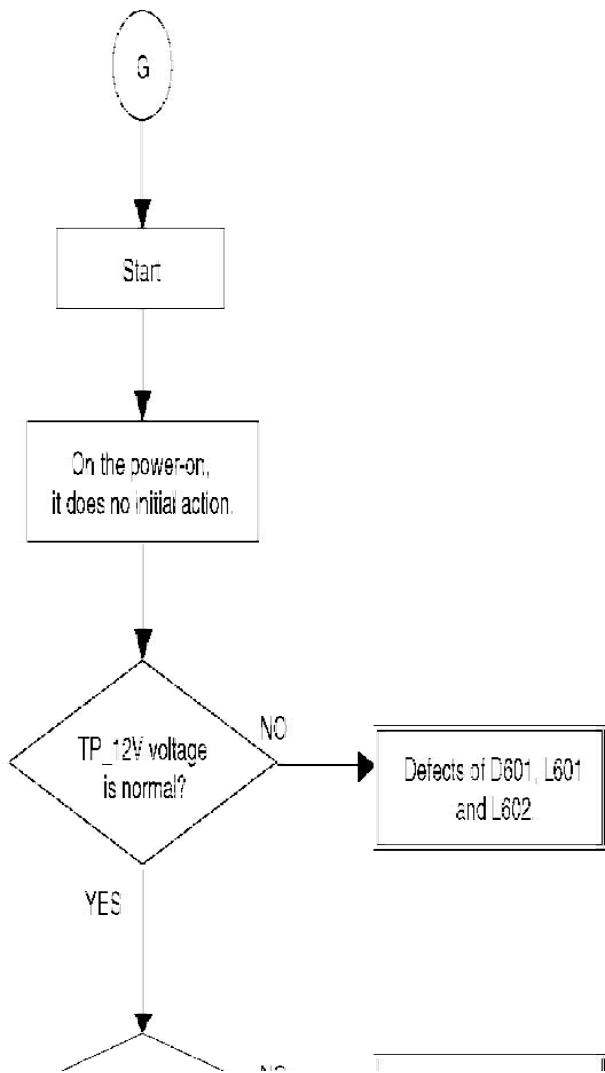

10.5.1. Check For The Action Of Pan

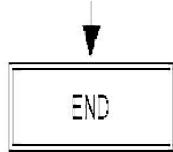

10.5.2. Check For The Action Of Tilt

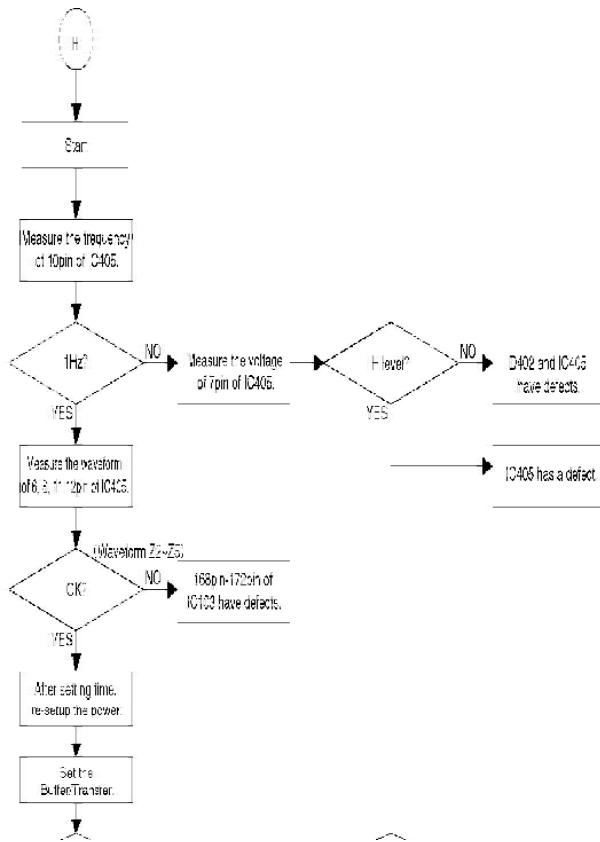

10.6. CHECK FOR POWER SUPPLY BLOCK

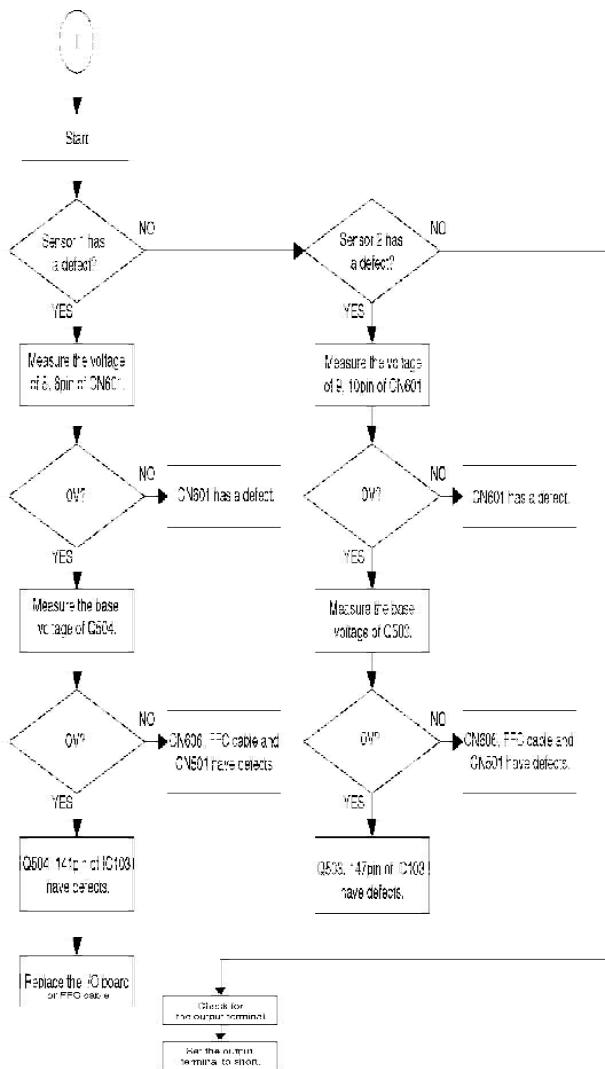

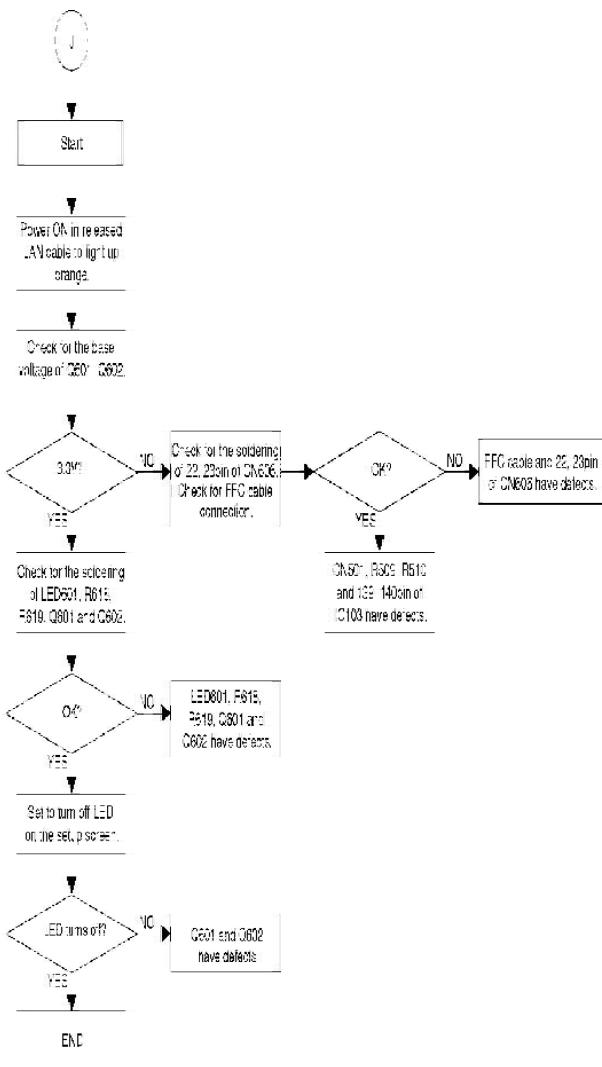

10.7. CHECK FOR RTC CIRCUIT

10.8. CHECK FOR I/O TERMINAL

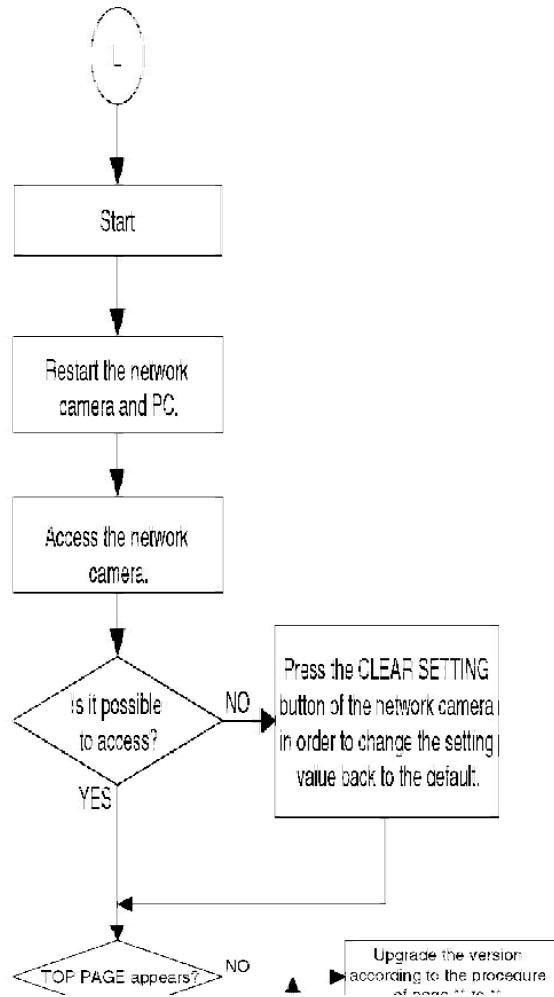

10.9. CHECK FOR LED CIRCUIT

10.10. CHECK FOR INITIALIZATION

10.11. CHECK FOR VERSION UPGRADE

11. THE WAY OF THE INITIALIZE

11.1. FACTORY DEFAULT RESET BUTTON

The camera has a Factory Default Reset button on the rear.

Pressing the Factory Default Reset button resets the camera to factory default.

If you lose your user name and password, use this button to reset the camera.

- **Press the Factory Default Reset button for 1 second when the camera is on.**
- **The indicator blinks orange, and turn off for 10 seconds.**
- **Do not turn off the camera until the indicator lights green.**

Note:

- Internal clock will not be reset, but the time format will return to AM/PM mode. Set it again.
- All buffered images are deleted when resetting the camera to factory default.
- The reset operation takes about 1 minute.

11.2. RESETTING THE CAMERA TO FACTORY DEFAULT

This feature will be executed and all camera settings reset to factory default directly after the Execute button is clicked.

1. Click [Reset to Factory Default] on the Maintenance page.
2. Click [Execute].

- The indicator blinks orange, and turn off for 10 seconds.
- All camera settings (user name, password, IP address, subnet mask etc.) are reset to factory default.
- If the camera is reset to factory default, the network connection mode changes to [Automatic Setup]. Reconfigure the camera seeing the Getting Started.

Note:

- Internal clock will not be reset, but the time format will return to AM/PM mode. Set it again.
- Please refer to Operating Instructions for default values.
- Pressing FACTORY DEFAULT RESET button resets the camera to the factory default.
- All buffered images are deleted when resetting the camera to factory

default.

- The reset operation takes about 1 minute.
- Do not turn off the camera during the reset operation.

12. NETWORK CAMERA KX-HCM110A BLOCK DIAGRAM

13. CIRCUIT DESCRIPTION

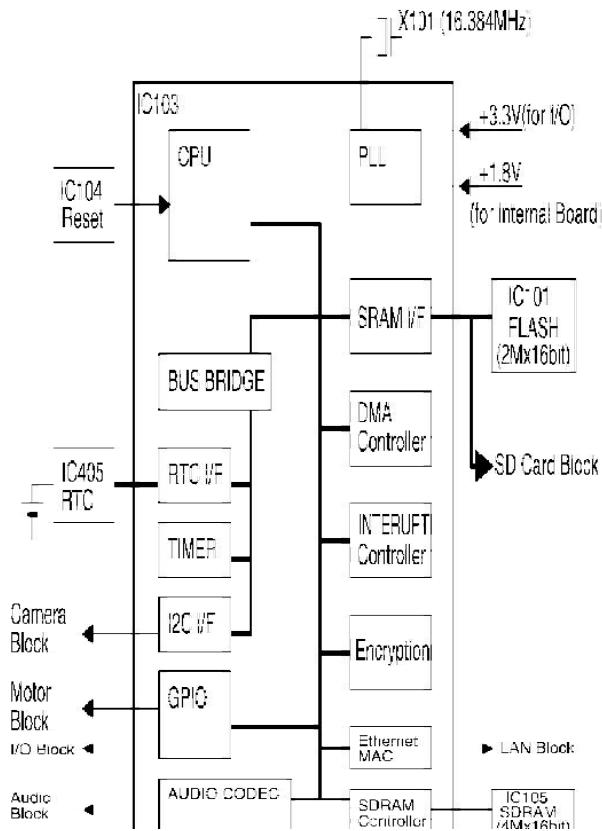

13.1. CPU PERIPHERAL BLOCK

- The IC103 is a system LSI for a network camera containing the CPU
- The power supply voltages are +3.3V (I/O) and +1.8V.
- The CPU is a 32-bit RISC CPU and performs mainly hardware control, TCP/IP protocol processing and applications such as http and FTP.
- The clock setting is 65.536MHz, which is the four times of 16.384MHz oscillation in the X101 by PLL.
- There are two types of external bus: the General-purpose bus through SRAM I/F and the bus for SDRAM only.
- The General bus is connected to a Flash Memory for program storage.
- The capacity of the Flash Memory (IC101) is 32Mbit (2Mx16bit); the program, the setting information for the network camera and the MAC address are stored.
- The SDRAM (IC105) is 64Mbit (4Mx16bit) and used for the CPU processing work, the communication data storage and the sound and image data storage.
- The RESET IC (IC104) monitors the power supply voltage, detects the rising edge of +3.3V and generates the Hardware Reset Signal.
- The IC405 is a RTC (Real Time Clock) and is used for the time setting of the image transfer. It is backed up at power-off by a lithium battery (BAT401). The I/F with the CPU has a dedicated controller. (5-line I/F)
- The Encryption block inside the IC103 is an Ipsec communication encryption engine and is used at the software protocol processing.

Signal Flow

1. When a request from the PC is received through LAN, the CGI command is analyzed at the CPU and the requested image/sound data are generated.
2. The JPEG image and sound data accumulated on the SDRAM are formed in IP packet by the protocol processing.

3. If the Ipsec is not encrypted, it is sent without change. If it is encrypted, this is carried out in the Encryption Block and a header is added to send to the Ethernet MAC part.

13.2. CAMERA BLOCK

<Basic Circuit Operation>

With a 0.35umCMOS process, this CMOS image sensor is composed of one chip that integrates the sensor assembly with the image processing DSP. Individual pixels composed of four transistors have micro-lenses to increase sensitivity, and light energy is converted to analog voltage. After that, the analog pixel voltage is converted to digital in a 10-bit AD Converter (ADC), at which time Correlated Double Sampling (CDS) dramatically reduces Fixed Pattern Noise (FPN).

The digitized analog pixel voltage data is gamma and color corrected, goes through color space conversion, and with PCLK, Hsync, and Vsync employed as timing interface signals, YUV is sequentially output digitally in 8-bit wide format. Image processing functions such as Auto-Iris (AE) and Auto White Balance (AWB) are built in and controlled automatically according to an internal algorithm in the chip.

Auto-Iris (AE) is controlled by the shutter speed.

Registry settings are performed in I2C<SCK, SDA> (IC2:22/23 pin) by the CPU (IC103) on the CPU board.

CMOS Color Image Sensor (IC2)

CMOS Color Image Sensor (IC2)

Operating voltage: +2.8V

- **E+2.8VA: Analog block voltage**

- **E+2.8VD: Digital block voltage**

Package:40pin CLCC

Image sensor and image-processing circuit embedded

Total pixels: 652 ~492 pixels

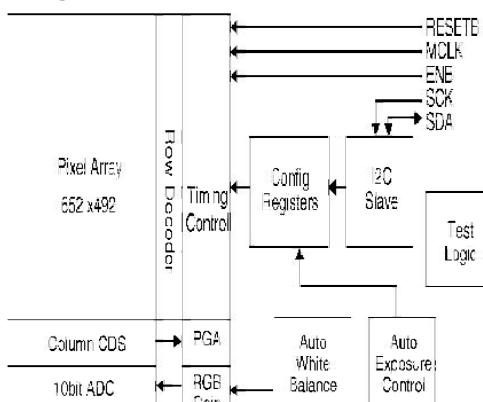

Effective pixels: 652~488 pixels

Image area: 1/4inch optical format

Color filter: RGB Bayer format

Input clock: 25MHz (To be supplied through the oscillation circuit in IC1 and X1.)

Block Diagram

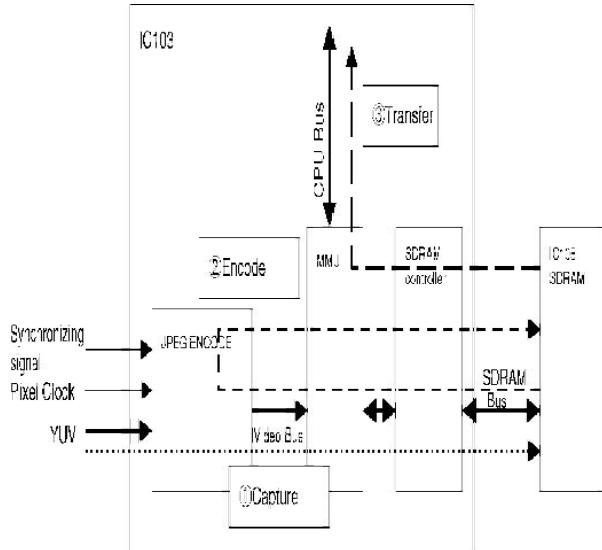

13.3. JPEG BLOCK

- The IC103 is a system LSI for a network camera containing the CPU.
- The JPEC Encode Circuit, the Memory Management Unit(MMU) and the SDRAM Controller are built into this LSI.
- The image data(YUV) inputted from a Camera Block is captured to the SDRAM through the JPEG Encode Block, the MMC and the SDRAM Controller. (1)
- The captured YUV data are inputted to the JPEG Encode Block again

and the JPEG processing is performed here. The compressed encode data are stored to the SDRAM. (2)

- A header is added to the encoded JPEG data by a direction of the CPU and it is transferred to a network after a protocol processing. (3)

13.4. SOUND BLOCK

External Microphone Jack (CN603)

Used with the external microphone.

Speaker Jack (CN604)

Used when connecting a speaker with a built-in amplifier, when the sound is output from a camera.

Microphone Detection (Q603)

When the external microphone plug is not inserted, pins 3 and 2 of the Microphone Jack (CN603) are short-circuited and a base current is supplied to Q603 through R603, R632 and R629 so that the Q603 goes ON and a collector (MIC_S signal) goes LOW. Alternatively, when the microphone plug is inserted, pins 3 and 2 of the CN603 become open so that the Q603 goes OFF and the MIC_S signal goes HIGH. From this signal, the CPU detects the microphone status.

The CPU turns the microphone SW on and off in the PCM Codec (IC601) for the external or the built-in microphone, as appropriate.

ALC Amplifier (IC602: For the built-in microphone, IC603: For the external microphone)

Power Supply: 3.3V

PCM Codec (IC601)

Power Supply Voltage: 3.3V

Clock Frequency: Contains a built-in PLL function and generates a clock from the BCLK (256 KHz). Contains an amplifier, LPF, gain adjustment, AD/DA converter, host I/F, PCM serial I/F and speaker output function.

Flow of Sound Signal

[Microphone sound]

- 1. The sound data input from pin 1 of the built-in microphone connector (CN607) is amplified by the amplifier in the PCM Codec (IC601) and the ALC (IC603), then input as the built-in microphone to the PCM Codec (IC601) again.**

When the level of the input sound signal is more than the specified value, the gain is changed and the output signal level is kept constant at the ALC (IC603). Sound distortion is controlled when the input is excessive.

- 2. When the external microphone is attached to the microphone jack (CN603), the sound signal input from pin 2 of the CN603 is amplified by the amplifier in the PCM Codec (IC601) and the ALC (IC602), then input as the external (microphone) to the PCM Codec (IC601) again**
The ALC (IC602) works in the same way as the IC603.

- 3. In the PCM Codec (IC601), after the sound signal is switched between the built-in microphone and the external microphone by a register setting from the host, amplification, AD conversion and gain adjustment are performed.**

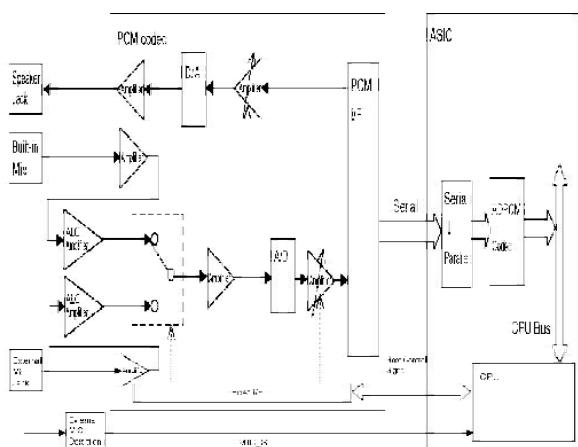

The sampling frequency of the A/D conversion is 8kHz and it is converted to the PCM in the format of 8bit and law. Then, 64kbps data are output to the ASIC (101) through the Serial I/F.

The data transfer of the Serial I/F is BCLK (256 kHz).

- 4. The data compression of 32kbps is performed in the ADPCM Block of the ASIC (101) and the data transferred as sound data.**

[Speaker Sound]

1. The ADPCM sound data are sent from the PC and, after data decompression in the ADPCM block of the ASIC (101), the data are transferred as the sound data of 64kbps to the PCM Codec (IC601) through the Serial I/F.
2. After the μ law to linear conversion, amplification and DA conversion, they are output to pin 2 of the speaker jack (CN604) as sound output signal in the PCM Codec (IC601).

13.5. LAN BLOCK

Composed of the IC103 (CPU), the IC202 (ETHER-PHY), the T601 (Transformer) and the CN605 (RJ45). The T605 (Transformer) obtains isolation between the Set and the Ethernet.

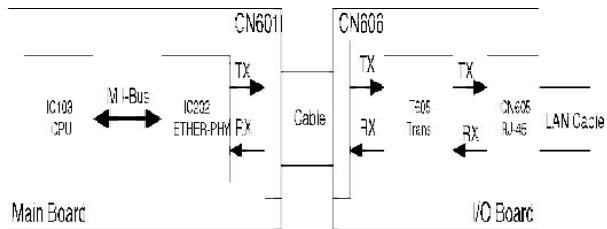

The IC103 (CPU) and the IC202 (ETHER-PHY) are connected by a signal called MIIBus and it makes Ether net data sending and receiving possible.

Sending

The electrical signal sent from the IC103 is converted to Ethernet data at the IC202 and sent from the CN605 through the T601.

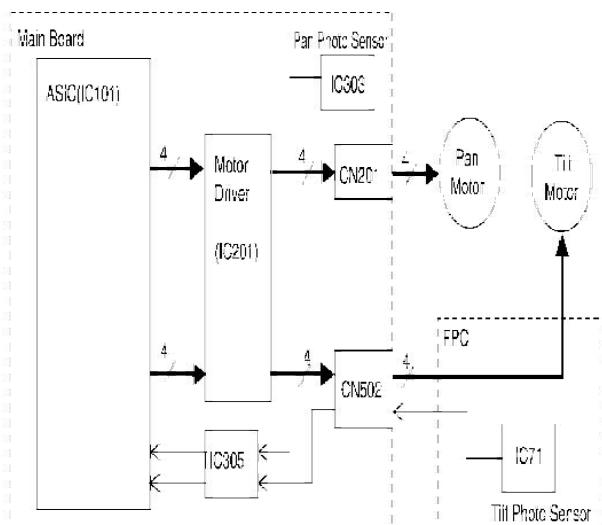

Receiving

The Ethernet data received from the CN605 is converted to electrical data at the IC202 and received to the IC103.

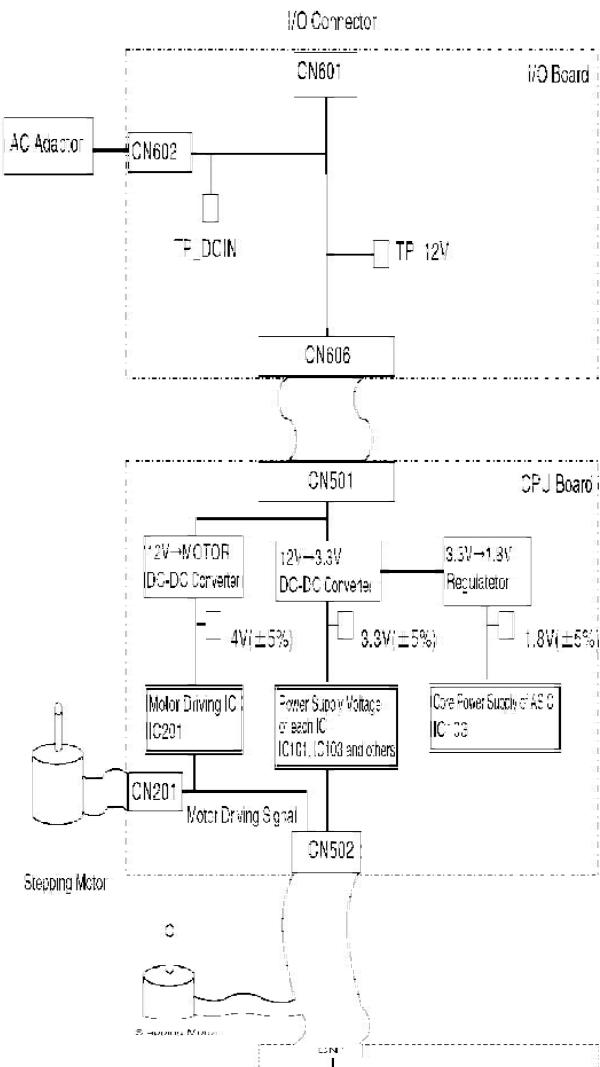

13.6. MOTOR DRIVING BLOCK

The pan tilt is performed, as the ASIC (IC101) mounted on the Main Board controls the Motor Driver (IC201). The home position of the pan tilt operation is detected by the Pan Photo Sensor (IC303 on the Main Board) and the Tilt Photo Sensor (IC71 on the Sensor FPC).

13.7. POWER SUPPLY BLOCK

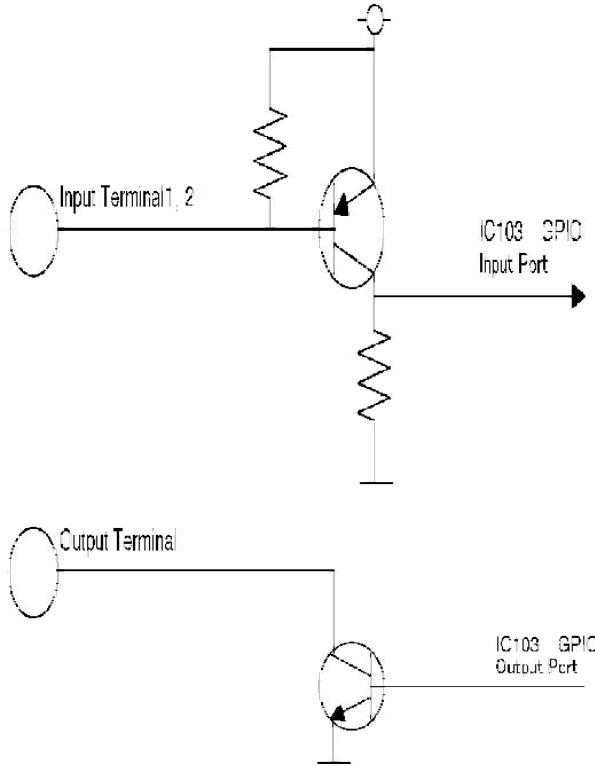

13.8. OTHERS

13.8.1. I/O Terminal

- The Input terminal has two systems; both of them are connected to the Input Port of the IC103 GPIO.
- Due to Internal Pull-up Resistance, the PNP Transistor (Q504, Q503) on the following level is usually in the OFF state and the Input Port connected to the collector is at L level.
- If the terminal is short-circuited with the GND or the signal of L level is input, the PNP Transistor goes ON and the Input Port goes to H level.

- The CPU checks the state of this port regularly to detect a change in this signal.
- The Output terminal is controlled by the Output Port of the IC103. When the Port output is L, the transistor (Q501) on the following level is OFF and, when the output is H, the transistor is ON. This transistor has open collector output and it controls external equipment via external pull-up.

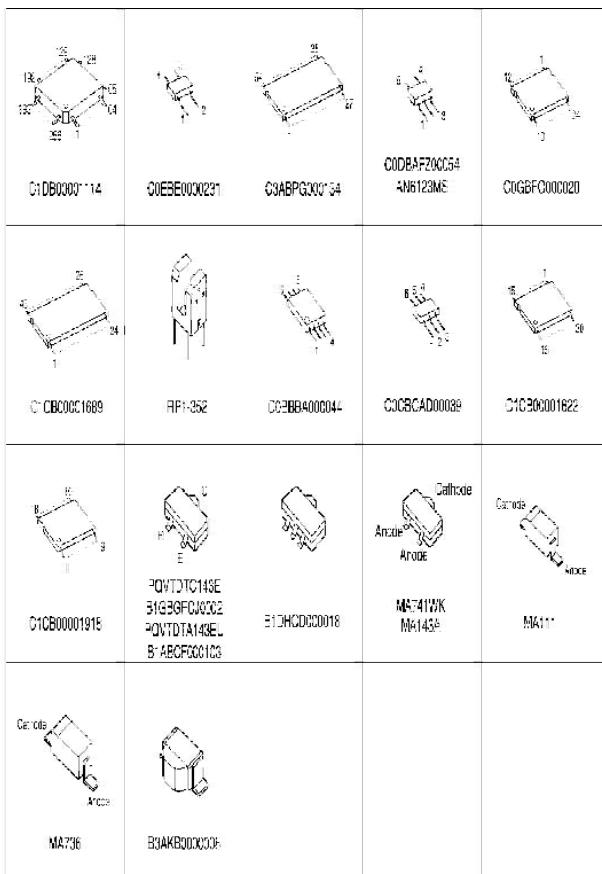

13.8.2. Clear Setting SW

- The Clear Setting SW (SW101) is connected to the Input Port of the GPIO. It is usually at H level and goes to L level, when the SW is pressed.
- The CPU monitors this Input Port regularly and, if it detects that this SW is pressed longer than a specified period, the setting values other than the RTC are returned to factory settings.

13.8.3. LED

- The LED (LED601) has two-color LEDs (red and green). When the transistor (Q601, Q602) connected to each LED is turned ON/OFF via the Output Port of the IC103, it controls the ON/OFF of the LED.

14. TERMINAL GUIDE OF ICS, TRANSISTORS AND DIODES

15. HOW TO REPLACE A FLAT PACKAGE IC

15.1. PREPARATION

- PbF (: Pb free) Solder
- Soldering Iron

Tip Temperature of $700^{\circ}\text{F} \pm 20^{\circ}\text{F}$ ($370^{\circ}\text{C} \pm 10^{\circ}\text{C}$)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

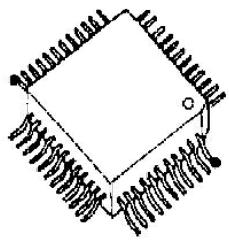

Recommended Flux: Specific Gravity 0.82.

Type RMA (lower residue, non-cleaning type)

Note: See [ABOUT LEAD FREE SOLDER \(PbF: Pb free\)](#) () .

15.2. PROCEDURE

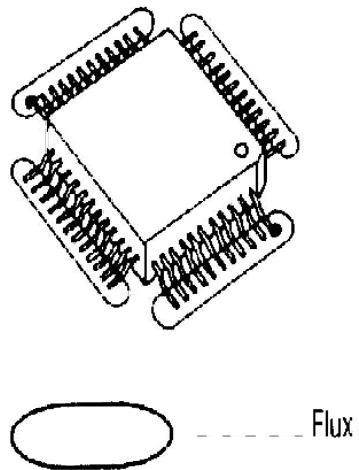

1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.

● - - - - Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

2. Apply flux to all of the pins on the IC.

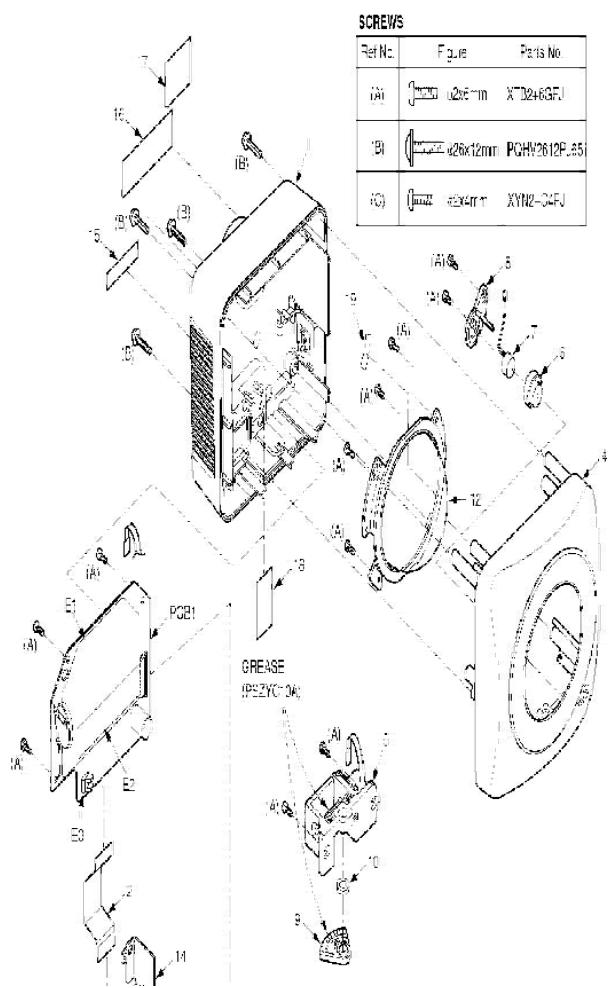

3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.

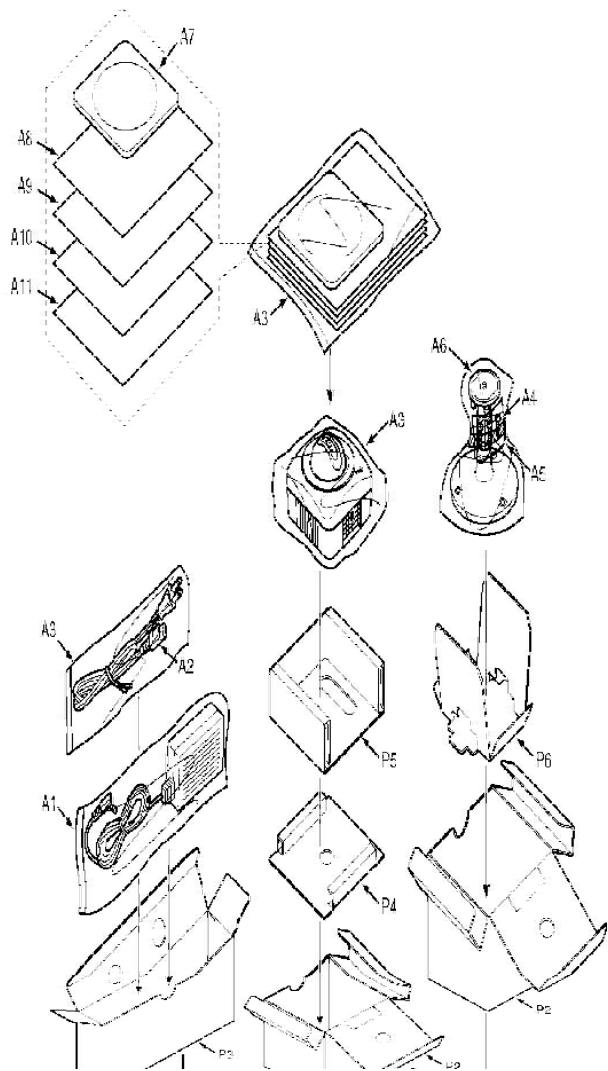

15.3. REMOVING SOLDER FROM BETWEEN PINS

1. Add a small amount of solder to the bridged pins.
2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.

16. CABINET AND ELECTRICAL PARTS LOCATION

17. ACCESSORIES AND PACKING MATERIALS

18. REPLACEMENT PARTS LIST

Note:

1. RTL (Retention Time Limited)

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability depends on the type of assembly and the laws governing parts and product retention. At the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the  mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacturer's parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. ISO code (Example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω), k=1000 , M=1000k

All capacitors are in MICRO FARADS (F), p= (F)

*Type & Wattage of Resistor

Ref. No.	Part No.	Part Name & Description
	PSZYC10A	GREASE

19. FOR THE SCHEMATIC DIAGRAM

Note:

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

Important safety notice

Components identified by mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
